CALL FOR PAPERS -- IEEE GLOBECOM 2011

Ad-Hoc and Sensor Networking Symposium

Symposium Co-Chairs

Jiming Chen, Zhejiang University, China
[Email: jmchen@iipc.zju.edu.cn]

Damla Turgut, University of Central Florida, USA
[Email: turgut@eecs.ucf.edu]

Sidi-Mohammed Senouci, University of Bourgogne, ISAT, France
[Email: Sidi-Mohammed.Senouci@u-bourgogne.fr]

Jalel Ben Othman, Versailles University, France
[Email: jalel.ben-othman@ prism.uvsq.fr]

Scope and Motivation:

The field of ad-hoc, sensor and mesh networking is re-emerging amid unprecedented growth in the scale and diversity of computer networking. In recent years, ad hoc and sensor networks have enjoyed a tremendous rise in popularity. The continued miniaturization of mobile computing devices and the extraordinary rise of processing power available in mobile laptop computers combine to put more and better computer-based applications into the hands of a growing segment of the population.

A Mobile ad-hoc network (MANET) is a system of wireless mobile nodes dynamically self organizing in arbitrary and temporary network topologies. People and vehicles can thus be internetworked in areas without a pre-existing communication infrastructure, or when the use of such infrastructure requires wireless extension. Therefore, such networks are designed to operate in widely varying environments, from military networks (with hundreds of nodes) to low-power sensor networks and other embedded systems. Dynamic topologies, bandwidth constraints, energy-constrained operations, wireless vulnerabilities, and limited physical security are among the characteristics that differentiate mobile ad hoc networks from fixed multi-hop networks.

There is a growing number of real applications using wireless ad hoc and sensor networks, and they are being taken seriously by the industries. These applications include, among others, emergency preparedness and response operations, decision making in the battlefield and data acquisition operations. Sensor networks have
already entered many aspects of our lives. Wireless sensors can be deployed in almost any hostile and harsh weather environments. As a result, the last few years have witnessed a wealth of research ideas on ad hoc and sensor networks that are moving rapidly into commercialization and standardization.

As wireless nodes proliferate and as applications using Internet become familiar to a wider class of customers, those customers will expect to use networking applications even in situations where the Internet itself is not available. For example, people using laptop computers at a conference in a hotel might wish to communicate in a variety of ways, without the mediation of routing across the global Internet. Yet today such obvious communications requirements cannot be easily met using the Internet. Providing solutions to meet such requirements will be the subject of this symposium. The basic solution to meet such requirements is to allow mobile computer users with (compatible) wireless communication devices to set up a (possibly) short-lived network just for the communication needs of the moment- in other words, an ad-hoc network. The ultimate goal is to enable a multitude of users at any place access information from anywhere at any time.

Before wireless and mobile ad hoc and sensor networking technology can be easily deployed, improvements must be made in such areas as: wireless technologies, variable topology, device heterogeneity, limited power supply and the lack of effective energy-efficient design, lack of QoS and application support, location and configuration management, addressing and routing, interoperability, and security. This symposium aims at providing a forum for sharing ideas among researchers and practitioners working on state-of-the-art solutions to the challenges above. We are seeking papers that describe original and unpublished contributions addressing various aspects of ad hoc and sensor networks.

Main Topics of Interest:

- Applications and Evolutions of Ad Hoc, Sensor, and Mesh Networks
- Autonomic Networking
- Wireless, Ad Hoc, and Sensor Devices
- Physical Layer Design of Ad Hoc, Sensor, and Mesh Networks
- Mobile Social Networks
- Frequency and Channel Allocation Algorithms
- Topology Control and Management
- Algorithms and Modelling for Localization, Target Tracking, and Mobility Management
- Architectures of Wireless Communication and Mobile Computing
- MAC Protocols for Ad Hoc, Sensor, and Mesh Networks
- QoS Provisioning in Medium Access Control and Routing for Ad Hoc and Mesh Networks
• Analytical, Mobility, and Validation Models for Ad Hoc, Sensor, and Mesh Networks
• Performance Evaluation and Modelling of Mobile, Ad Hoc, Sensor, and Mesh Networks
• Integrated Simulation and Measurement based Evaluation of Ad Hoc and Sensor Systems
• New Simulation Languages, Methodologies, and Tools for Wireless Systems
• Analysis of Correctness and Efficiency of Protocols
• Data Management, Data Aggregation, Data Dissemination, and Query Processing
• Cryptography and Security Issues in Ad Hoc, Sensor and Mesh Networks
• Distributed Algorithms
• Pricing Modelling and Solutions
• Pervasive and Wearable Computing
• Co-existence Issues of Hybrid Networks
• Energy Saving and Power Control Protocols for Ad Hoc, Sensor, and Mesh Networks
• Resource Management Algorithms in Mobile, wireless Ad Hoc and Mesh Networks
• Synchronization and Scheduling Issues in Mobile and Ad Hoc Networks
• Service Discovery for Wireless Ad Hoc, Mesh, and Sensor Networks
• Cross-layer Design and Interactions
• Mobile Service and QoS Management for Ad Hoc and Sensor Networks
• Survivability and Reliability Evaluation and Modelling for Ad Hoc, Sensor, and Mesh Networks
• Ubiquitous and Mobile Access for Wireless Mesh Networks
• Security and Privacy Issues for Wireless Ad Hoc, Mesh, and Sensor Networks
• Vehicular to vehicle and vehicle to infrastructure communication
• Real-world testbeds, Field operational testing (FOT) and Simulation and emulation platforms

Technical Program Committee

Ayman Abdel-Hamid, Arab Academy For Science, Technology, and Maritime Transport
Nael Abu-Ghazaleh, State University of New York at Binghamton
Mosa Abu-Rgheff, University of Plymouth
Nadjib Achir, University of Paris 13
Rui Aguiar, University of Aveiro
Ahmed Ahmed, Zagazig University
Toufik Ahmed, University of Bordeaux-1 / CNRS-LaBRI
Chunyu Ai, Troy University
Ozgur Akan, Koc University
Yuanzhu Chen Memorial University of Newfoundland
Zesheng Chen Indiana University - Purdue University Fort Wayne
Xiangqian Chen Florida International University
Canfeng Chen Nokia Research Center
Weigang Chen Tianjin University
Yu Cheng Illinois Institute of Technology
Maggie Cheng Missouri University of Science and Technology
Soumaya Cherkaoui University of Sherbrooke
Carla-Fabiana Chiasserini Politecnico di Torino
Xiaowen Chu Hong Kong Baptist University
Garth Crosby Southern Illinois University Carbondale
Felipe Cruz-Pérez Cinvestav-IPN
Jun-Hong Cui University of Connecticut
Grzegorz Danilewicz Poznan University of Technology
Luca De Nardis University of Rome La Sapienza
Ilker Demirkol University of Rochester
Jing Deng University of North Carolina at Greensboro
Mario Di Francesco University of Texas at Arlington
Yu Dong Florida International University
Falko Dressler University of Erlangen
Arjan Durresi Indiana University Purdue University Indianapolis
Khaled Elsayed Cairo University
Mohamed Eltoweissy Pacific Northwest National Laboratory
Melike Erol-Kantarci University of Ottawa
Jeffrey Evans Purdue University
Lorenzo Favalli University of Pavia
Gianluigi Ferrari University of Parma
Stefan Fischer University of Luebeck
Hacene Fouchal Université de Reims Champagne-Ardenne
Hannes Frey University of Paderborn
Vasilis Friderikos King's College London
Laura Galluccio University of Catania
Jie Gao Stony Brook University
Yacine Ghamri-Doudane LIGM and ENSIIE
Tirthankar Ghosh St. Cloud State University
Paolo Giacomazzi Politecnico di Milano
Silvia Giordano University of Applied Science - SUPSI
Steven Gordon Thammasat University
Yu Gu Singapore University of Technology and Design
Isabelle Guerin-Lassous Université de Lyon - LIP
Mourad Gueroui PRISM, University of Versailles
Mina Guirguis Texas State University
Sghaier Guizani UAE University
Eren Gurses University of Waterloo
Cheng Li Memorial University of Newfoundland
Xiaoyan Li Lafayette College
Xiaolin (Andy) Li University of Florida
Tianji Li National University of Ireland, Maynooth
Jie Li University of Tsukuba
Jun Li Communications Research Centre Canada
Phone Lin National Taiwan University
Marco Listanti University of Rome "La Sapienza"
Hai Liu Hong Kong Baptist University
Qin Liu Wuhan University
Donggang Liu University of Texas at Arlington
Jiangchuan Liu Simon Fraser University
Tsung-Hsien Liu National Chung Cheng University
Errol Lloyd University of Delaware
Giuseppe Lo Re University of Palermo
Chengnian Long Shanghai Jiao Tong University
Rongxing Lu University of Waterloo
Xiaoning Lu Qualcomm
Chung-Horng Lung Carleton University
Dario Maggiorini University of Milano
Petri Mähönen RWTH Aachen University
Bertrand Mathieu Orange Labs
